How Does Occupation Growth in the Region Compare to Other Metro Areas?

Data on growth for broad and detailed occupation categories was collected for 2014 and 2017 from the Bureau of Labor Statistics for several Metropolitan Statistical Areas (MSA) in Pennsylvania as well as the Commonwealth as a whole. The difference between each detailed occupation category was calculated using this three-year interval in order to show how occupational growth varies between regions in Pennsylvania.

The broad occupation category with the highest percentage change in each MSA is shown below. Categories with fewer than 500 employees were excluded from the calculation.

Among the detailed occupational categories, the occupation categories that added the most jobs in the Scranton-Wilkes-Barre-Hazleton MSA were: Laborers and Freight, Stock, and Material Movers, Hand (4,360 jobs added),

and Serving Workers, Including Fast Food (1,330), Nursing Assistants (1,030), Stock Clerks and Order Fillers (1,030), and Personal Care Aides (760).

The fastest growing jobs by percent change (that reported at least 100 jobs in each year) in the Scranton-Wilkes-Barre-Hazleton MSA saw no exact overlap with those by difference. The fastest growing jobs by percent change included: Maintenance workers,

(continued on the next page.)

Fastest Growing Broad Occupation Category (2014-2017)

By Percent Change, for Selected Metropolitan Statistical Areas

Architecture & Engineering Occupations

Such as architects, engineers, and engineering technicians
Scranton/Wilkes-Barre/Hazleton (+24%)
Allentown/Bethlehem/Easton (+42%)

Community and Social Service Occupations

Such as social workers and counselors
Altoona (+19%)

Legal Occupations

Such as lawyers, paralegals, court reporters, and judges
York/Hanover (+16%)

Personal Care and Service Occupations

Such as barbers, child care workers, and fitness trainers
Erie (+37%)
Pittsburgh (+20%)

Source: Bureau of Labor Statistics Occupational Employment Statistics

Occupations *(continued from Page 1)*

Machinery (161 percent increase), Slaughterers and Meat Packers (155), Property, Real Estate, and Community Association Managers (120 percent), Protective Service Workers, All other (118 percent) and Food Servers, non-restaurant (106 percent).

Among the region’s fastest growing occupations by both total growth and percent growth, a theme is apparent in the emphasis on lower thresholds for formal education (High school diploma or equivalent), as only one of the ten mentioned occupations was listed as normally requiring a bachelor’s degree. This differs only slightly from trends of

highest growth jobs in Pennsylvania, as they generally require high school diplomas or associates degrees.

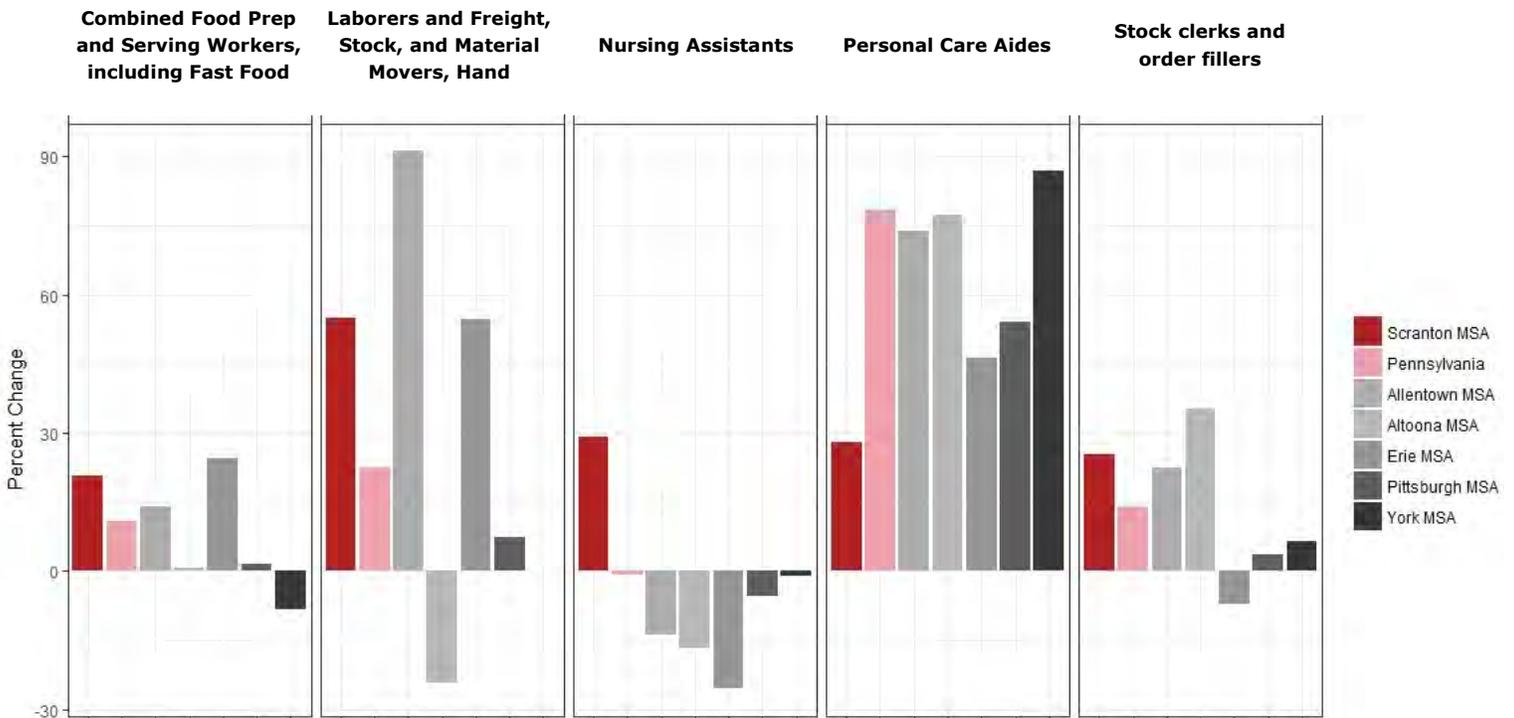

Cross-Region Comparison

The figure below shows the percent growth for several MSAs and Pennsylvania for the five detailed occupation categories that saw the largest total growth from 2014 to 2017. In 2014, the York-Hanover MSA did not report the number of Laborers and Freight, Stock, and Material Movers, so the MSA is omitted from that category.

The Scranton-Wilkes-Barre-Hazleton MSA was the only MSA of those investigated that increased the number of Nursing Assistants from 2014 to 2017. When it comes to food preparation and serving workers, the region’s growth was only outpaced by Erie, and Allentown was the only MSA to exceed regional growth in laborers and material movers. However, all MSAs saw large increases in the number of Personal Care Aides, with Northeast PA showing the smallest percentage change. ♦

Health Insurance: Regional Data & Trends

The implementation of the Affordable Care Act has significantly impacted health insurance economics regionally and around the United States. The 2015 open enrollment period saw 16,570 total consumers participating in Healthcare.gov plans. This total grew in 2016, but fell in 2017 following a sharp drop in new enrollees.

Participation in all private health insurance plans grew from 2010 to 2011, then fell from 2011 to 2013. Private coverage grew significantly from 2013 to 2014. Currently, about 72 percent of the region's residents are covered by private plans.

Simultaneously, there has been growth in public health insurance plans, from 34 percent to 40 percent regionally. There has also been a decrease in the percentage of the region's population with no coverage, from over ten percent to about four percent. ♦

Who Are The Unbanked in Northeastern PA?

Special Indicators 2018 Preview

At the 2018 Regional Indicators Forum on May 10th, The Institute's Jobs, Economy, and Economic Development (JEED) task force will be presenting findings from its recent research paper on the unbanked.

The unbanked are those who do not use or who underutilize traditional financial services such as banks. Those who lack access to financial services, or who choose not to utilize them, frequently may then turn to costlier options such as check cashing services, bill payment services, or payday lenders.

The task force research builds upon recent research the task force has

undertaken on financial literacy. Lack of knowledge on personal finance, especially among high-risk populations, contributes to the underutilization of financial services.

As part of this year's research, The Institute conducted a brief survey and focus group of those who do not utilize banks. A range of issues, including bank fees, trust, and cultural barriers were identified as reasons for individuals being unbanked. The Institute will release the full report at the May 10th event and online in the coming weeks. ♦

Business, Nursing Are Top Degrees in Region

Data was compiled on degrees and credentials awarded by the region’s higher education institutions for the 2015-2016 school year. The total number of degrees awarded in the region totaled 8,540, which were comprised of 31 percent certificates and 2-year awards, 40 percent 4-year awards, and 28 percent postgraduate awards.

In both counties, business administration and registered nursing had the highest total of degree awards, at 514 and 420, respectively. Lackawanna County’s top five fields were rounded out by accounting, Bible/Biblical studies, and social work. Luzerne County’s included teacher educational and professional development, liberal arts, and other education.

Several other fields, such as Psychology, Biology, and Licensed Practical Nursing, were also represented in the top 15 fields in both counties.

Blue-collar occupations,, and trades were represented in both counties as well, including commercial vehicle operations (Luzerne County), cosmetology (Lackawanna County).

The chart on the following page shows the ten fields with the highest regional total of awards, with breakdowns by degree type. The top field regionally, business administration, was comprised of 307 4-year degrees, 130 graduate degrees, and 77 2-year degrees. Registered nursing is largely split between 2-year and 4-year awards, as is liberal arts/liberal studies. Several other fields, accounting, criminal justice, and biology, are primarily made up of 4-year degree awards.

Several other fields, such as Psychology, Biology, and Licensed Practical Nursing, were also represented in the top 15 fields in both counties.

Degrees *(continued from Page 4)*

Teacher Professional Development accounted for 203 graduate degrees, nearly all awarded in Luzerne County. Finally, medical/clinical assistant and LPN awards were entirely made up of certificates or 2-year degrees. This dataset shows that the region's higher education institutions award a mix of degrees levels in a variety of fields to meet the region's ever-evolving workforce challenges. ♦

Construction Industries Projected to Add Jobs

The construction industry in the region employs over 10,000 workers as of late 2017, with an average annual salary of \$48,778, 16 percent higher than the regional average wage for all industries. The industry has seen 0.1 percent employment growth over the last five years, but there are projected to be 5,303 openings in the next five years. Of those, 187 are projected to be new jobs (rather than openings due to workers retiring or leaving the industry). This yields a 0.4 percent annual rate of job growth, compared to all industries where 5-year new job growth is projected to be flat.

Several components of the construction industry are also shown below, with the top three sub-industries for each indicator highlighted in blue. Building equipment contractors is both the largest current construction industry by employment and appears ripe for job growth, with a forecast 77 new jobs. Utility system construction is also projected to have strong job growth, and is the highest paying industry shown with average annual wages of nearly \$70,000 per year. ♦

Selected Economic Indicators

Quarterly Workforce Indicators

Quarterly Workforce Indicators is a national dataset of key labor market data produced by the U.S. Census Bureau. The Indicators presented below measure employment at the beginning of the quarter, full quarter employment (stable jobs in existence for the duration of the quarter), new hires, separations (including voluntary and involuntary separations), and turnover rate (the rate at which stable jobs begin and end—one measure of the rate of job creation). Data is presented for the three most recent calendar years for which data is available.

Beginning of quarter and stable employment have trended upwards regionally. The most recent quarter, Q4 2016, saw the sharpest increase in stable employment, and both stable and beginning of quarter employment reached their highest levels in the time period analyzed.

Hires and separations have followed an annual pattern with no definitive trend, as data is not seasonally adjusted. Hires and separations have consistently been lowest in the first quarter of each year. In both counties, the average annual turnover rate matched or exceeded the statewide rate for each year. Lackawanna County has consistently had the highest turnover rate, but it fell from over 9 percent to 8.7 percent from 2015 to 2016. During the same time, Luzerne County's turnover rate rose from 8.2 percent to 8.5 percent.

Labor Market at a Glance

Throughout 2017, the region, Commonwealth, and United States all continued to see marked improvement in unemployment rates. Both counties, still however, have higher rates than PA or the US. In January 2018, in both counties and statewide, the most recent non-preliminary data available, saw a 0.4 percent decrease in the unemployment rate from the same month of the prior year.

In both counties, the total labor force has seen small declines in recent years, with both counties' workforces shrinking by about 100 between January 2017 and January 2018. Meanwhile, continued slow but steady growth in employment has yielded the improvement in the unemployment rate noted above. ♦
